Another Successful FACTORY
ACCEPTANCE TEST (FAT) With
One of Our Utility Clients!

September

During September, our ACE Engineers completed yet a few Factory Acceptance Tests (FATs) for an ACE utility client.

The purpose of Factory Acceptance Testing (FAT) is to demonstrate the hardware quality, system configuration, and specification compliance of the SCADA system prior to proceeding with the site works.

The FAT also provides an opportunity for our experienced team to make recommendations for further optimisation of client operations.

At ACE, we have the expertise to design, develop and deliver the systems architecture, define the requirements and to test the solution – all in a day's work!

"The trouble with programmers is that you can never tell what a programmer is doing until it's too late." – Seymour Cray

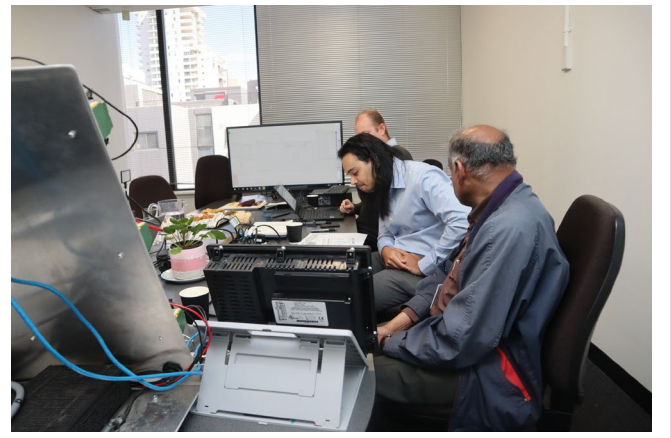

"If you don't like testing your product, most likely your customers won't like to test it either" – Anonymous

"The bitterness of poor quality remains long after the sweetness of meeting the schedule has been forgotten" – Karl Wieggers

CLIENT SUCCESS STORY

**TOOLIBIN LAKE
TELEMETRY SYSTEM**
– Implemented by ACE for managing the
lake's environment

Exciting news from Toolibin!

"The lake has filled from a winter rainfall event for the first time in nearly 40 years!

It is hectic, at the moment, as we take the opportunity to gather data during this significant event and enjoy it as well. Thank you always for your (ACE) teams prompt service and reply"

- Marie - Conservation Officer for Parks and Wildlife Services

Marie - Thank you for your Feedback!
